

Conference Rooms Made Easy with Full AV Automation with Conferencing System

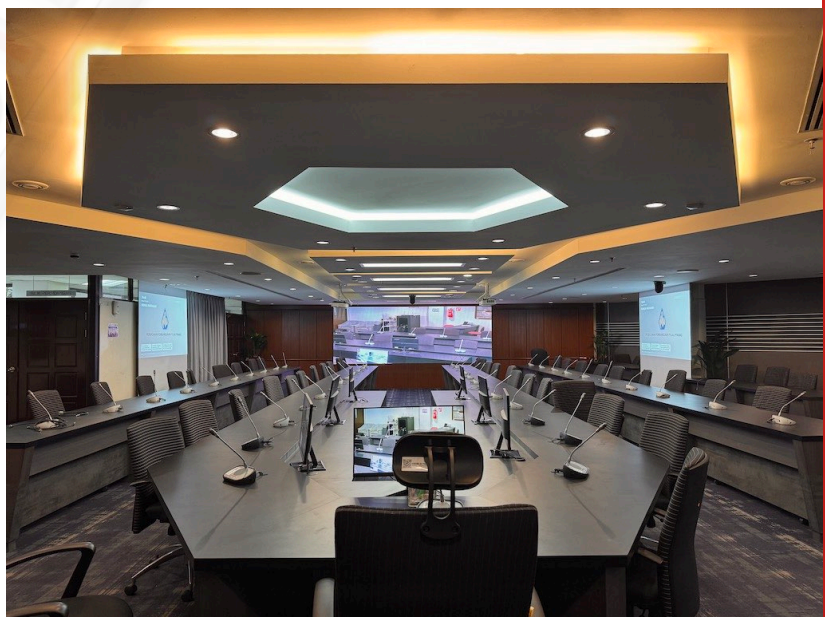

- Penang Development Corporation (PDC)

A 10th generation gadget was brought as a system control device. The small conference room has been equipped with simple yet advanced technologies such as an 86" Maxhub Interactive Flat Panel with touch screen functionality and Windows presentation capabilities. The Crestron AirMedia is an exceptionally powerful wireless device that enables seamless wireless presentation and conferencing in only two seconds, allowing images to be shown on a TV.

Project solution:

- Extron IPCP550 Xi LL Processor
- Extron MGP461xi Processor
- Extron DXP44 Matrix
- Extron DMP128 Plus C
- Panasonic UE40 4K Camera
- Panasonic Nanoex Air Purifier
- Yeastar Workplase System
- Installation Testing & Commissioning

The state-of-the-art equipment, which included MGP processor, Crestron AM, Panasonic UE40 4K camera with Power over Ethernet (PoE+) capabilities, was installed and seamlessly integrated into the Conference Room by **VisiDinamik**.

Vector scaling technology-enabled Extron multi-window processor MGP 461 4K/60 scaler on a single screen (LED Video Wall). The Extron DXP 44 4K HD matrix was utilised to organise images for the VIP conference table, including the LED video wall, projection screens, and monitors.

VisiDinamik used the Extron DMP 128 C Plus together with Panasonic cameras and the Bosch Digital Conference System to facilitate a parliamentary-style meeting experience for participants. The meeting may be initiated by pressing the conference button. The Extron IPCP550xi, a robust device, played a significant role in integrating goods, hardware, and software into a control device.
