- Crestron DSP 128 Audio Solution
- iPad 10th Generation-Control
- HP 2500 Pot+ Switch
- ScreamBeam 960
- Panasonic 45" 4K TV
- Installation Testing & Commissioning

**N**umerous firms are reevaluating their physical environment as they adjust to the practicality of hybrid work. For particular individuals, this means either opening or closing specific areas according on the number of employees present in the workplace. For some individuals, it involves seeking innovative methods to maximise the use of their restricted area. It is possible to improve cooperation in meetings of any size by including displays such as TV with online video conferencing platform. The users are able to collaborate effectively, share ideas, and annotate the information freely.

**U**nder the supervision of an IT consultant and interior designer, Visi Dinamik incorporates new and existing audiovisual equipment at Tokyo Electron. The AVOIP solution enables the client to optimise the utilisation of the available space for their meeting room. The solution enables users to present the content wirelessly or wiredly using their own device. The flexibility of NVX routes enables it to manage and distribute all of your content in a flawless and latency-free manner. With an AV-over-IP solution that incorporates Pixel Perfect Processing, each image retains its original quality.
